

# Microsoft SharePoint 2010 Readiness HealthCheck

Ensure you are ready to take advantage of the features and capabilities of SharePoint 2010.

## Understand how ready you are to upgrade to SharePoint 2010.

**Microsoft SharePoint has established itself as a leading portal, content management and business collaboration solution.**

The latest version of SharePoint, SharePoint 2010, has recently been released and offers organisations many new ways of creating, consuming and sharing information and data.

Whether it's used as a standalone system, or forms part of a larger solution, Microsoft SharePoint is a platform that is increasingly relied on by organisations of all sizes, in all industries.

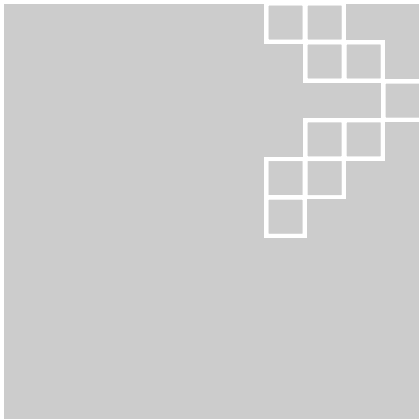

In its latest release, SharePoint 2010 delivers a broader range of capabilities than previous versions, while also delivering greater flexibility to those organisations who deploy it. Additionally, SharePoint provides capabilities for many other Microsoft solutions which rely on it for information access and delivery. In other words, your SharePoint investment will become even more widespread and mission critical than it is today.

Designed for existing users of SharePoint our SharePoint 2010 Readiness HealthCheck helps you to determine how ready you are to take advantage of SharePoint 2010.

In the course of this engagement, we review your existing SharePoint implementation and provide high-level guidance as to how complex upgrading to SharePoint 2010 may be, as well as review with you the features of SharePoint 2010 to determine their applicability for your organisation.

The benefits of this service are simple: Your organisation can quickly understand how easy or difficult it may be to upgrade to the latest version of SharePoint, while at the same time understanding the key benefits of this latest release to assist any business case or decision making. To summarise: We demystify what's involved in making the step up to SharePoint 2010.

## SharePoint 2010 Readiness HealthCheck

### Customer Profile

This service is ideal for organisations who want to:

- » Upgrade to SharePoint 2010 from an earlier version of SharePoint.
- » Understand how SharePoint 2010 can add value to their organisation, and what may be involved in upgrading.
- » Obtain an overview of SharePoint 2010, providing a baseline of information that can be used for decision-making purposes.

## Service Overview

The SharePoint 2010 Readiness HealthCheck engagement typically includes the following key activities and deliverables, which are tailored to meet client-specific requirements:

- » **Review Current SharePoint IT Infrastructure**— We examine your current SharePoint infrastructure, such as configuration management, security, network topology, Active Directory, and CPU (32-bit/64-bit).
- » **Review Current SharePoint Software Environment**—We look at your current software environment including the Server operating system, SQL Server, SharePoint, SharePoint web parts and customised code, and any third-party complementary software, if present.
- » **Review Current Use of SharePoint Best Practices** – We evaluate the use of best practices in the current SharePoint implementation from a business process, governance, and technology perspective.
- » **SharePoint Infrastructure Recommendations and Implementation Roadmap** – This deliverable includes the results of the assessment and provides recommendations to prepare for upgrade to SharePoint 2010 and a roadmap listing prerequisites.
- » **SharePoint Software Recommendations and Implementation Roadmap** – This deliverable includes the results of the assessment and lists the steps to prepare the SharePoint software environment, including SharePoint web parts and customised code, and third-party software, in preparation for an upgrade to SharePoint 2010.
- » **SharePoint Best Practices Recommendations and Adoption Roadmap** – This deliverable includes the results of the assessment and provides an evaluation and recommendations for implementing SharePoint Best Practices from a business process, governance, and technology perspective in preparation for SharePoint 2010. This includes recommendations on how best to adopt new capabilities and features made available in SharePoint 2010.

### Key Benefits

We can assist your organisation to:

- » Better understand the capabilities of your existing SharePoint implementation.
- » Identify any new capabilities and benefits that SharePoint 2010 could provide your organisation.
- » Determine what effort and investment would be involved to upgrade to SharePoint 2010 for the purposes of planning and budgetary purposes.
