

Rapid Results for Enterprise Search

Use the power of enterprise search to locate documents and data faster, empowering users and increasing productivity

Who is this service for?

- » Organisations embarking on an enterprise search project and wanting a solid foundation
- » Organisations wanting to run a proof of concept search project – this will get you up and running quickly with definite results
- » Organisations that have significant quantities of documents and files and want to help their users find them more quickly and easily

Locate information quickly and easily using enterprise search.

We all create content every day. Documents, spreadsheets and other data are created and stored within and across most organisations. The challenge is to find it again – for both you and your organisation.

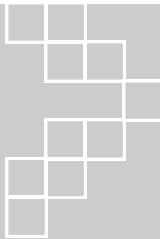

While it has become easier to create content, finding it again has become more challenging. As people change roles, or leave organisations, valuable information assets remain stored in disparate locations, and other users may not know of their existence. Worse, neither may the organisation itself, who has effectively paid for their creation.

We're accustomed to the power and convenience of web search engines to quickly find what we need, and there has been a long-standing vision to have this same technology available within organisations. Now, with products such as Search Server from Microsoft (standalone or as part of Office SharePoint Server 2007), organisations can index content across all or part of an organisation, including file stores, web

sites and intranets – and users can have access to flexible tools that allow them to search these areas in a similar way to how they use web-based search engines.

The benefits are numerous: End users can reuse documents, saving valuable time, improving knowledge sharing and retention, and reducing end user frustration when getting up to speed with a task; organisations can get a better understanding of where these valuable informational assets are stored. Business intelligence is more than just numbers – finding and understanding content is just as important.

InterGen's Rapid Results for Enterprise Search gives organisations the opportunity to quickly get up and running with the Microsoft Search Server platform, delivering powerful search capabilities to users across an organisation. Complementing an intranet project, or as a project in its own right, this initiative delivers effective results within a short period of time, providing the core foundation necessary for an enterprise search solution.

Intergen Rapid Results for Enterprise Search_

Implementation Process

Intergen Rapid Results for Enterprise Search enables organisations to quickly get up and running, using a predefined scope, templates and a proven implementation approach.

The Intergen Rapid Results predefined scope covers:

- » **Scoping** of the system, including user numbers that need to be supported, deployment options and existing portal solutions and data sources.
- » **Prioritise** which sources of content are important (within the confines of Rapid Results).
- » **Configuration and Setup** of the system, including data sources, managed and crawled properties, thesaurus and cosmetic enhancements. Includes deployment of specific search feature enhancements.
- » **Training** of key users in the base functionality of the solution, including any ongoing administration tasks that are required.
- » **Post Go Live Support** of up to one day's effort within the first three weeks of live use.
- » **Post Go Live Review** of the system after three weeks of live use.

Given the broad range of options available with a search solution, Intergen Rapid Results for Enterprise Search has a fixed scope and timeframe of deliver; refer to the Statement of Work for more information.

Rapid Results for Enterprise Search can utilise Microsoft Search Server, Office SharePoint Server 2007 (Standard or Enterprise) or Microsoft Search Server Express, depending on requirements.

If you require a more advanced set up than that provided as part of a Rapid Results implementation, Intergen will agree costs associated with this through a change control process.

What we need from you

To implement Rapid Results in our 10 day timeframe we need your support.

We would expect you to provide:

- » Business Subject Matter experts to be involved throughout the project.
- » Compilation of suitable thesaurus entries.
- » Technical resource to manage the installation with Intergen support.
- » Commitment of all key users to attend a training session.

How much does it cost?

Intergen Rapid Results for Enterprise Search is priced at \$15,000 excluding GST, hardware and software licenses.

If you require a more advanced configuration than that provided as part of the standard Rapid Results offering, or want to take advantage of other third party products that can add more value, Intergen can discuss options with you to and provide estimates of any associated costs.

Next Steps

Contact Intergen now to discuss how we can help you implement your enterprise search solution.
